

# your nutritional approach to joint health

## A Movement in Joint Health

Our joints are the centre of every move we make. But more and more people report some type of joint problem. These joint issues make it difficult to maintain an active lifestyle — whether you're a world-class athlete or simply finding it harder to move freely as you age.

Fortunately, science has discovered an array of nutrients that contribute to joint health. You could mix and match bottles of vitamin pills. Or, you can get optimal levels of more than 20 powerful ingredients in one convenient, highly absorbable A-affect shake. No other joint performance formula comes close. Bottom line: A-affect works.

## Nutrition Breakthrough

Patented A-affect combines the best traditional Eastern herbal therapies with cutting-edge nutrients clinically proven to help repair and restore existing joint tissues.

**Glucosamine:** natural compound proven effective in rebuilding cartilage, protecting against joint deterioration and promoting healthy joint function; also stimulates production of collagen, a key component of the fibrous substance that holds joints together.

**Arthred®:** hydrolyzed collagen protein (HCP); consists of the same series of amino acids that form the framework of human cartilage and are required for its generation.

**Boswellin:** herb used in Eastern medicine to help with joint and muscle swelling.

**Ashwagandha:** herb that reduces inflammation and relieves discomfort.

## Dual Action

More than simply a solution to a problem, A-affect also provides prevention for the future — allowing you to maintain your healthy, active lifestyle.

Short-term relief. Greater comfort means you can continue to move freely. A proprietary blend of powerful herbs including boswellin and ashwagandha, work to reduce swelling and inflammation.

Long-term function. Whether you're a marathon runner or a casual golfer, your joints will suffer wear and tear over the years. Glucosamine and Arthred work to protect against deterioration by improving the body's ability to improve existing collagen and cartilage.
