

## your nutritional approach to joint health

### A Movement in Joint Health

Our joints are the center of every move we make. But according to the CDC, more than 90 million Americans report some type of joint problem. These joint issues make it difficult to maintain an active lifestyle — whether you're a world-class athlete or simply finding it harder to move freely as you age.

Fortunately, science has discovered an array of nutrients that contribute to joint health. You could mix and match bottles of vitamin pills. Or, you can get optimal levels of more than 20 powerful ingredients in one convenient, highly absorbable Arthaeffect® shake. No other joint performance formula comes close. **Bottom line: Arthaeffect works.**

### Nutrition Breakthrough

Arthaeffect combines the best traditional Eastern herbal therapies with cutting-edge nutrients clinically proven to help repair and restore existing joint tissues.

**Glucosamine:** natural compound proven effective in rebuilding cartilage, protecting against joint deterioration and promoting healthy joint function; also stimulates production of collagen, a key component of the fibrous substance that holds joints together.

**Hydrolyzed Collagen Protein:** consists of the same series of amino acids that form the framework of human cartilage and are required for its generation.

**Boswellin:** herb used in Eastern medicine to help with joint and muscle swelling.

**Ashwagandha:** herb that reduces inflammation and relieves discomfort.

### Dual Action

More than simply a solution to a problem, Arthaeffect also provides prevention for the future — allowing you to maintain your healthy, active lifestyle.

**Short-term relief.** Greater comfort means you can continue to move freely. A proprietary blend of powerful herbs including boswellin, ashwagandha and borage oil, works to promote mobility and relieve discomfort.

**Long-term function.** Whether you're a marathon runner or a casual golfer, your joints will suffer wear and tear over the years. Glucosamine and collagen work to protect against deterioration by improving the body's ability to improve existing soft tissues and cartilage.
